Bulletin No: PB519

Issue Date: 2-10-2026

Effective Date: 3-1-2026

Description/Title:

Improvements to ATX Series Drivers

Comments:

The ATX Series Drivers will be updated in 2026 with the following improvements:

- A slightly larger lever so that when it is fully pressed, it is not recessed below the housing.
- Threading at the bit end of the tool for accessory/automation mounting will be changed to left-hand threading to mitigate loosening of the flange mount at high torque settings.
- The cap for the threading has been redesigned for ease of removal.
- Collar for the LED work lights has been shortened to provide better illumination of the working area.

These changes will begin to appear, starting with the ATX-50, and will appear in the ATX-12 and ATX-30 as we cycle through our inventory this year.

Part No:

ATX-12, ATX-30, ATX-50

Specification:

Unchanged
